Hospitals, in their quest for optimization of patient treatment, are faced with the difficulty of combining the safest and the most accurate treatments with a simple workflow. High-tech equipment often lacks ease-of-use, resulting in stress and risks, whilst simplicity might not bring the dedicated treatment to the optimal level.

Terumo’s Terufusion Advanced Infusion System offers accurate, reliable and innovative syringe and volumetric pumps, without putting an extra burden on healthcare professionals. We combine sophisticated technologies with stress-free, easy-to-use functionalities to facilitate them to pursue the best patient outcomes.

Using leading-edge technologies, SMART Terufusion pumps facilitate easy and secure drug management, provide enhanced infusion capabilities, and opens a way to hospital network integration.

Completing the line-up with syringes, infusion sets and accessories, Terufusion Advanced Infusion System is a comprehensive and reliable partner for infusion management optimization.

Terufusion Advanced Infusion System: successful integration of ease-of-use, safety and professionalism.
Volumetric Infusion Pumps

Standard
- TE-LF630 / TE-LF632
- TE-LM730 / TE-LM732

Smart
- TE-LM830 / TE-LM835

Syringe Pumps

- TE-SS730 / TE-SS732
- TE-SS830 / TE-SS835
Concept of Advanced Infusion System

**Easy handling**

**All-in-one information at a glance**

Healthcare professionals need to see all the important information in an efficient, correct and fast way.

All-in-one information on big 4.3 inch colour screen helps healthcare professionals to receive such information in vivid colour, with comprehensive illustration.

**Easy disposable settings**

First-time users are in need of simple instructions to start up pumps.

To facilitate this, visual instructions on how to set an infusion set or a syringe are shown on the large coloured screen.
Mobile, portable & flexible

Healthcare professionals like to move pumps around, attaching and removing them easily and quickly.

By using the integrated handle and the flexible pole clamp, it is easy for healthcare professionals to quickly attach or remove pumps from a pole or Terufusion rack.
Fast classification and recognition of drugs

Many drug names look alike with each other, and healthcare workers are constantly under stress not to make mistakes.

Terufusion Drug Library Manager enables healthcare workers to define 16 different colours out of 96 combinations of colours and patterns. In addition, drug names can be defined in Tall Man letters in compliance with FDA recommendation, and are shown on the screen with colours.

Enhanced safety
Safety first

Healthcare professionals need to see at a glance which alarm or warning has been activated.

By colours and realistic illustrations, the Terfusion pump allows to differentiate instantly between high (red) and low (yellow) priority of alarms.

Precaution against unintended infusion

If a healthcare professional forgets to close the roller clamp when removing the tube from the infusion pump, the risk of free flow is quite high.

The Anti Free Flow (AFF) function is aimed at preventing inadvertent excess infusion by automatically closing the tube with the anti-free flow clip when the door is opened.
Extensive communication capability

**Optimizing patient treatment**

To optimize patient treatment a balanced and continuous infusion of multiple medications is imperative.

Internal communication between Terufusion SMART pumps stationed in a Terufusion communication rack system provides special functions like Piggy and Take Over Mode for a balanced continuous infusion.

---

Extensive communication capability

In addition to connectivity via SMART racks (WIFI, Wired LAN & RS-232C), Terufusion SMART pumps offer stand-alone WIFI connectivity.

Hospital professionals can not only upload drug libraries to pumps, but also download History data, analyse them in graphical format, and feedback for improved operation. Pumps can also be integrated into hospital information systems.

---

Profile-Alerts TOP10

- Soft Limit Override
- Hard Limit Exceeded
- Flow Rate ≥ VTBI
- All other alerts
- Cumulative percentage
Different drugs have different ways of taking effect.

Terufusion SMART pumps provide not only **Dose Mode** options (ml/h, µg/kg/min, mg/kg/h), but also **Advanced Modes** such as ‘Intermittent’, ‘Multi-Step’ and ‘Delayed Start’. All these can be selected and applied, depending on the type of medication.

Terufusion®

Hardware accessories

Included accessories
• AC power cable
• Pole clamp (screw type)
• Instruction manual

Optional accessories
• Drip sensor TE*977 (standard for LF series)
• One touch pole clamp TE*877

Rack systems
• TE*RS700N
• TE*RS800N03
• TE*RS811N

Terumo Luer-Lock syringes

• Available in all sizes
• Highly transparent barrel
• Bold, easy legible and accurate scale markings
• No Latex & PVC components
• Special silicon coating
• Double contact gasket

Infusion and Extension Sets

• Easy setting following the instruction screen of the pump
• Adjustable roller clamp with notch to mount tubing during priming
• AFF clip for prevention of accidental bolus infusion
• Reliable high accuracy combination of Terumo pump & sets*
• Durable tubes for continuous accurate infusion

* Flow rate accuracy: within ± 5%

Full focus infusion system

Terumo offers a comprehensive portfolio of solutions for the complete infusion line-up: user-friendly syringe and volumetric pumps and racks, as well as a wide range of highly accurate, easy-to-use disposables, such as an extended range of infusion sets and syringes.
